

PEEK to meet your high performance requirements

PEEK polymers are high performance thermoplastics, available in pellet and powder forms, have delivered reliability in a wide range of challenging applications.

Areas of use: aerospace, automotive, electronics, energy, medical, industrial.

### Properties

- Light weight
- High resiliency performance across a broad temperature range
- Excellent wear and abrasion resistance
- High resistance to harsh chemicals and natural elements
- Long-term mechanical properties and dimensional stability
- Meet strict safety requirements with low fire, smoke and toxicity emissions
- Excellent barrier properties against fluids and gases
